DIGITAL LASER DISTANCE METER **LD05-HTGF**

with glass-fiber coupled remote optical head

The RIEGL LD05-HTGF is a laser distance meter based on precise time-of-flight laser range measurement especially suited for demanding applications under critical environmental conditions, i.e. high ambient temperature or hazardous environment. It is additionally optimized for very high target temperatures.

It uses state-of-the-art **digital signal processing** to enable precise distance measurement for complex multi-target situations even under bad visibility conditions. Digitizing the echo signal and subsequent analysis enables multi-target distance measurements.

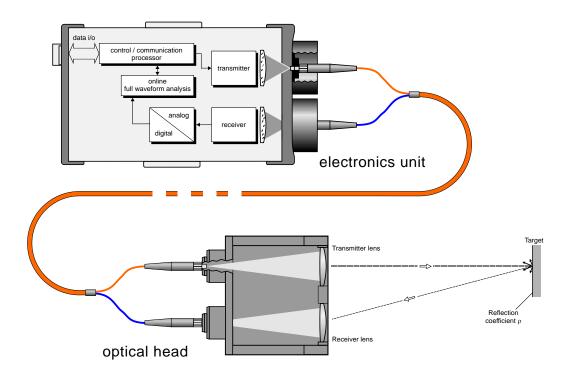

The measuring system consists of an optical head meeting the requirements of the relevant application and a separate electronics box, connected by a duplex glass-fiber cable of variable length with connectors on both sides.

- Electronics unit and measuring head can be mounted separately according to requirements resulting from critical environmental conditions
- Further improved measurement capability in demanding situations causing poor visibility (rain, dust, fog).
- Short infrared laser pulses providing excellent interference immunity
- Narrow measurement beam with low divergence for excellent spatial resolution
- Measurement to almost any surface regardless of the angle of incidence of the beam and the surface characteristics
- Significant enhancement of the maximum range based on predetection-averaging

General Description LD05-HTGF

Principle of Operation

An electrical pulse generator periodically drives a semi-conductor laser transmitter, emitting infrared light pulses, which are fed into a glass fiber cable. The pulses are guided to the optical head and collimated by the transmitter lens. Part of the echo signal reflected by the target is coupled into the glass fiber cable via the receiver lens and guided back to the electronics unit.

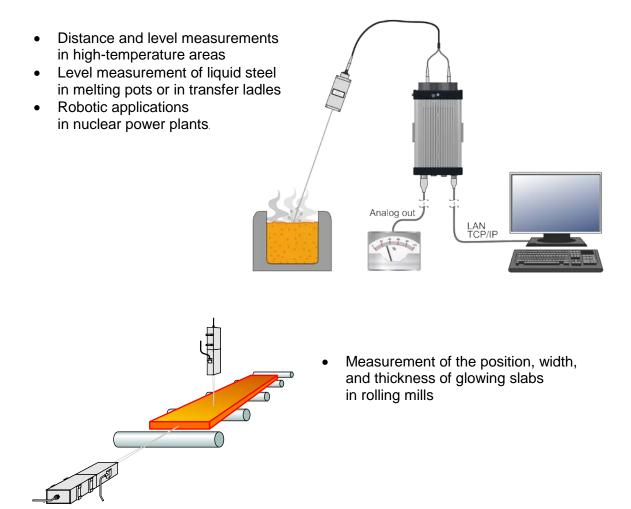

A receiver converts the optical echo signal into an electrical signal, which is digitized internally and subsequently forwarded to a subsystem for on-line full waveform analysis. Sophisticated algorithms for waveform analysis improve the instrument's capabilities to measure the desired target even in the presence of smoke, fumes or dust.

Features and Advantages:

- The LD05-HTGF electronics unit can be combined with various optical heads to suit nearly any requirement.
- The optical head contains no electronics and is therefore extremely small, lightweight, inexpensive, high-temperature resistant, and insensitive to electromagnetic or ionizing radiation.
- The duplex glass-fiber cable connecting the electronics unit and the optical head provides galvanic insulation between optical head and electronics box. Its length can be specified with options ranging from 4m to more than 100m.

General Description LD05-HTGF

Main Applications

The LD05-HTGF is optimized for measuring very hot and glowing targets in steel plants, rolling mills, foundries etc.:

Transmitter and receiver optics are equipped with narrow-band optical filters to avoid disturbances of the measurement caused by the radiation of light and heat from the hot target surface. If necessary the front side can be equipped with an additional protection tube, which can be flushed with nitrogen or compressed air to keep the lenses clean.

General Description LD05-HTGF

Digitizing the echo signal and analyzing it allows excellent clutter suppression under demanding environmental conditions, i.e., in the presence of dust, smoke or fumes.

To meet different application challenges, user parameters as measurement rate, maximum target count (first target only, last target only, all targets) or sensitivity are adjustable.

Standard Interfaces:

- WEB Interface for configuration via WEB browser
- LAN TCP/IP ports
- RS232 / RS422 port

Optional Industrial Interfaces:

- Analog output 4 20 mA
- Digital switching output (2x)

Optional Infrared Radiation Channel:

With this option the LD05-HTGF also measures the infrared radiation received in a well-defined wavelength band emitted by the targets within the solid angle of the measurement beam with every range measurement. The output is proportional to the logarithm of the received infrared power and can be calibrated to give the target's surface temperature within the range of 300°C to 1600°C.

Further key features of the LD05-HTGF are:

- Short infrared laser pulses providing excellent interference immunity
- Narrow measurement beam with low divergence for excellent spatial resolution
- Lightweight, with a stable metal housing, suitable for use in rough industrial environments.

The technical data can be influenced by the environmental conditions to a considerable extent, especially by the following parameters and coniditions:

- Surface temperature and reflection characteristics of the target
- Distance to the target
- Angle of incidence of the measurement beam
- Optical attenuation of the gases between target and instrument

Specifications

	LD05-HTGF in combination with Optical Head MK36-XX
Measurement range in High Penetration Mode ¹⁾	
Optimized for liquid steel,	
temperature up to 1600°C Optimized for glowing slabs,	3 m to 10 m
temperature up to 1450°C Optimized for other targets,	2 m to 35 m
temperature up to 1000°C	2 m to 100 m

Examples for integrated predefined measurement programs:

High Penetration Mode	LD05-HTGF in combination with Optical Head MK36-XX	
Measurement accuracy 2)	typ. \pm 10 mm	
Measurement rate 3)	typ. 100 Hz	

Fast Mode	LD05-HTGF in combination with Optical Head MK36-XX	
Measurement accuracy 2)	typ. \pm 15 mm	
Measurement rate	typ. 1000 Hz	

¹⁾ Depending on the surface temperature and the reflection coefficient of the target

²⁾ One sigma @ 5 m range under RIEGL test conditions (except measurements at reflective foil / retro-reflective targets).

³⁾ With self-adapting measurement time selected, the effective data update rate depends on the reflectivity of the target.

Laser Specifications

	LD05-HTGF in combination with Optical Head MK36-XX near infrared	
Wavelength		
Beam divergence diameter of the infrared measuring beam @ 3 m - 10 m @ 50 m @ 100 m	approx. 30 mm approx. 120 mm approx. 240 mm	
Laser Product Classification according to IEC 60825-1:2007	Class 1	
The following clause applies for instruments delivered into the United States: Complies with 21 CFR 1040.10 and 1040.11 except for deviations pursuant to Laser Notice No. 50, dated June 24, 2007.	CLASS 1 LASER PRODUCT	

Electrical Data

	LD05-HTGF in combination with Optical Head MK36-XX		
Data interfaces			
Data port Configuration port	TCP/IP, 10/100/1000 MBit port or RS232/RS422 TCP/IP, 10/100/1000 MBit port or RS232/RS422		
WEB Interface	TCP/IP, 10/100/1000 MBit port		
Power supply	11 – 28 V DC, 24 VDC nominal		
Power consumption	18 W		
Optional Analog Output	4 – 20 mA ¹⁾ , not galvanically isolated, resolution 16 Bit, linearity 1 ‰ of full scale		
Switching Output	2 x PNP transistor driver ²⁾ , built-in thermal and short-circuit protection, switching current 200 mA max., switching voltage = supply voltage		

- Operating range selectable via TCP/IP port or serial interface. Switching points adjustable via TCP/IP port or serial interface.

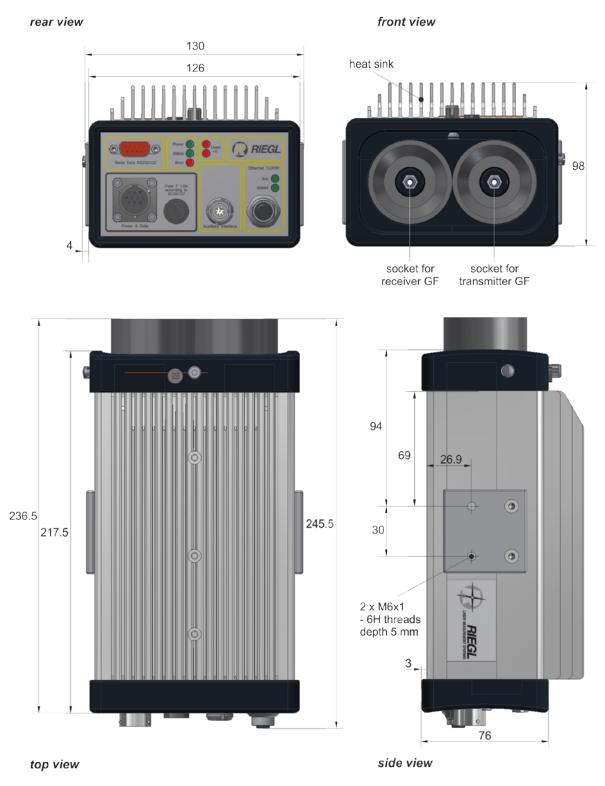

Physical Data

Electronics Unit	LD05-HTGF		
Main dimensions (L x W x H)	245.5 x 130 x 98 mm		
Weight	approx. 2.8 kg		
Protection class glass-fiber cables attached	IP64		
Temperature range Operation Storage	+15°C up to +50°C ¹⁾ -20°C up to +60°C ¹⁾		
Mounting	Flanges on both sides		

¹⁾ The life expectancy (MTBF) of the instrument is reduced in case of operation and/or storage at high temperatures.

Optical Head	MK36	MK36-Z65	MK36-PT	МК36-НТ
Main dimensions (L x W x H)	120x80x50 mm	133x Ø65 mm	500x120x70 mm	655x Ø285 mm
Weight	0.67 kg	0.4 kg	approx. 4.4 kg	10.0 kg
Protection class glass-fiber cables attached	IP62	IP 62	IP62	IP64
Temperature range Operation Storage	-20°C up to +80°C -20°C up to +80°C			

Dimensional Drawings

All dimensions in mm.

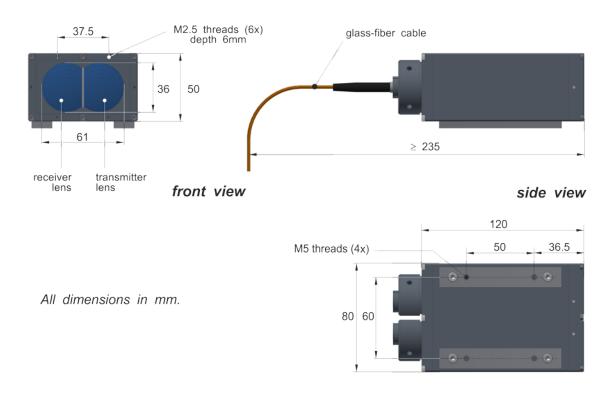

Remote Optical Head MK36:

case: aluminium, black anodized

main dimensions: 120 x 80 x 50 mm

weight: 0.67 kg

protection class: IP62 (glass fiber cables attached) temperature range: -20° to +80° C (operation and storage)

Remote Optical Head MK36-Z65:

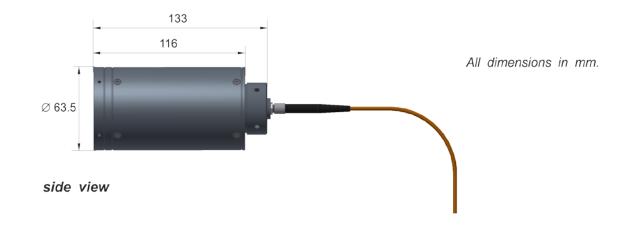

case: aluminium, black anodized

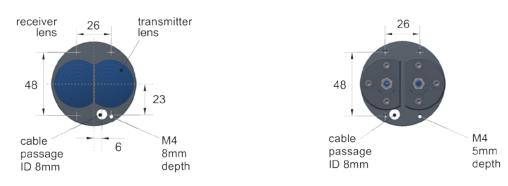

(stainless steel version on request)

main dimensions: 133 x Ø 65 mm

weight: 0.4 kg

protection class: IP62 (glass fiber cables attached) temperature range: -20° to +80° C (operation and storage)

front view rear view

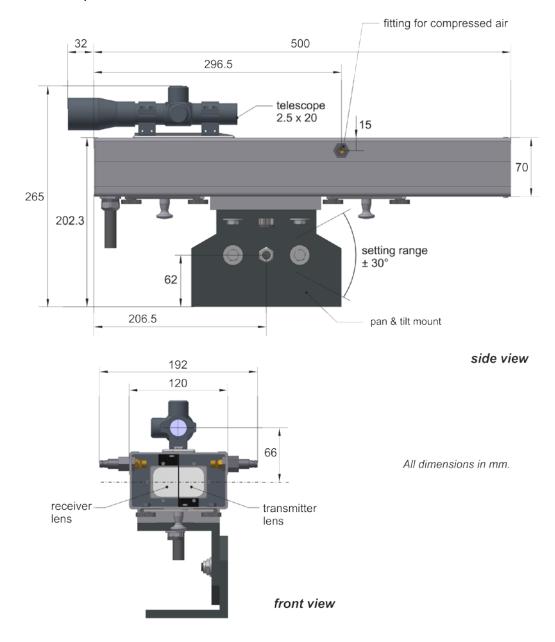

Remote Optical Head MK36-PT:

case: aluminium, black anodized

main dimensions: 500 x 120 x 70 mm weight: approx. 4.4 kg

protection class: IP62 (glass fiber cables attached) temperature range: -20° to +80° C (operation and storage)

recommended air pressure: 2-4 bar

Remote Optical Head MK36-HT:

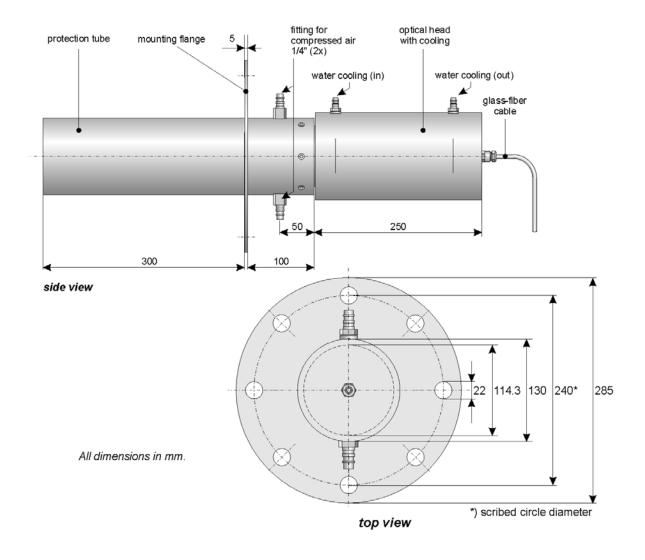

case: aluminium, colorless anodized

main dimensions: 655 x \varnothing 285 mm

weight: 10 kg

protection class: IP64 (glass fiber cables attached) temperature range: -20° to +80° C (operation and storage)

recommended air pressure: 2-4 bar
